

# **GULFSTREAM™ HEAT PUMP** **Offers Solar Hybrid Operation!** *What a Brilliant Idea!*

The GulfStream™ Heat Pump is the **ONLY** heat pump to incorporate a built-in feature to optimize usage of your solar pool system along with your electric heat pump.

## **HERE'S HOW IT WORKS**

Solar Pool Heating is environmentally friendly and a great way to save money heating your pool. However, sometimes Solar may not meet everyone's needs & desires. Factors such as how warm you like your pool, weather conditions, time of year and other issues may affect your Solar Heating results.

**The GulfStream offers a feature which detects the performance of your solar pool heating system.**

This feature is built **DIRECTLY** into the High Efficiency GulfStream Heat Pump.  
for **SEAMLESS** operation between the two systems.

Set your desired temperatures on the GulfStream High Energy Series Heat Pump.

As your solar system operates, the GulfStream continually monitors heating performance. When your GulfStream detects that the pool temperature has dropped **BELOW** your desired temperature, The GulfStream automatically kicks into operation.

The GulfStream then closes the gap between what your solar system is delivering and your desired pool temperature

When Solar Operation resumes to reach your desired temp, the GulfStream allows the Solar Pool System to then take over heating duties, and starts saving you money immediately.

**This system designed for you to get the maximum benefit, savings and pleasure from your pool heating system.**

This is one of the many features that make the GulfStream the **BEST** choice in pool heating
